

KEY

Crust: The crust is like Earth's outer skin, where we live and find mountains, oceans, and all the cool stuff!

Mantle: Below the crust, there's the gooey mantle, moving slowly like melted cheese on a pizza.

Outer Core: The outer core is like hot, liquid chocolate, swirling around and making a magnetic field.

Inner Core: At the very center, there's the solid, glowing-hot inner core, our planet's warm and solid center!
