

ROUND TO TENTHS: TWO DIGITS

Place candy or a round object in circle to represent a decimal. Using number flashcards, place a 2-digit number in the first box. Then, round to tenths and place the correct 1-digit number in the second box.

The diagram illustrates the rounding process in two rows. The top row is blue and the bottom row is orange. Each row consists of a circle on the left labeled "place candy here" and a square on the right labeled "place two-digit card here". An arrow labeled "round to tenths" points from the first square to the second circle. A second arrow labeled "round to tenths" points from the second circle to the second square, which is labeled "place one-digit card here".
