

A long time ago, people wanted a better way to talk to each other over long distances. They used to send letters, but letters took a long time to arrive. Then, in the year 1876, a man named Alexander Graham Bell invented the telephone. The telephone allowed people to talk to each other even if they were far apart. This was a big change for everyone!

Alexander Graham Bell was born in Scotland. He was very interested in sounds and how people hear them. He worked with people who had trouble hearing. One day, he thought about sending voices through wires. He worked hard on this idea and finally made a machine that could do it. He called it the telephone.

Bell's first telephone was very simple. It had a transmitter and a receiver. The transmitter turned the sound of your voice into electric signals. These signals traveled through a wire to the receiver. The receiver turned the signals back into sound so the other person could hear your voice. It was a very clever invention!

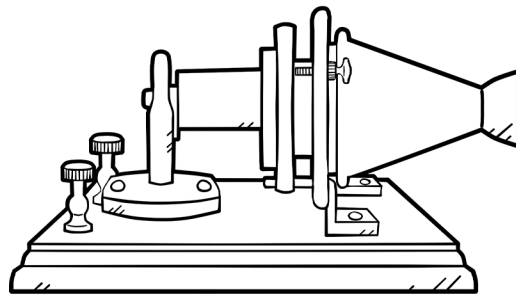

When people first heard about the telephone, they were very excited. Businesses wanted to use it so they could talk to their customers quickly. Families wanted it to talk to their loved ones who lived far away. Soon, many people had telephones in their homes. It made talking to each other much easier and faster.

Today, telephones are everywhere. We have mobile phones that we can carry in our pockets and have great capabilities. But it all started with Alexander Graham Bell's invention in 1876. Thanks to him, we can talk to anyone, anytime, no matter where they are.

1. The telephone was invented in the year 1876.

- a. True
- b. False

2. The first telephone was very complicated and hard to use.

- a. True
- b. False

Word Bank:

Scotland transmitter signals telephone

Why was the invention of the telephone important for people?

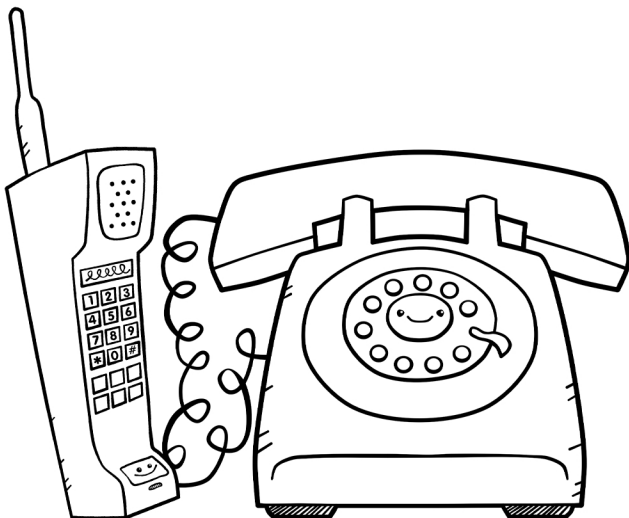

Who invented the telephone?

- A) Thomas Edison
- B) Alexander Graham Bell
- C) Nikola Tesla

What did the transmitter in the first telephone do?

- A) Turned sound into electric signals
- B) Made loud noises
- C) Sent letters

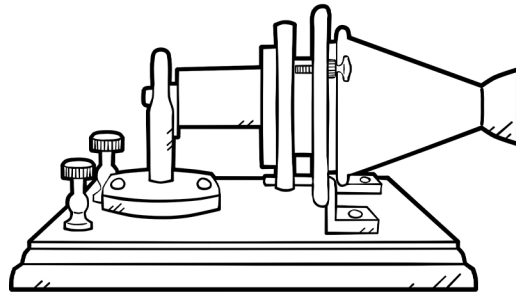

Where was Alexander Graham Bell born?

- A) United States
- B) Scotland
- C) Canada
