**bicycles****both****scooters**

Bicycles and scooters are both fun to ride outside. They both have wheels and handlebars. Bicycles and scooters can help us get places faster than walking. We need to wear helmets when riding both. Bicycles have two big wheels, but scooters usually have two small wheels. We sit on bicycles to ride them, while we stand on scooters. Bicycles have pedals we push with our feet, but we push scooters with one foot on the ground. Most bicycles have brakes on the handlebars, while we stop scooters with our feet.
