

Birds vs. Fish

Name: _____

Date: _____

Choose a color for each type of fact below. Read the passage and highlight key facts as you go.

**birds****both****fish**

Birds and fish are both animals that we can see. They both lay eggs to have babies. Birds and fish both have eyes to see and mouths to eat. You can find birds and fish in many places around the world. Birds have feathers and wings, but fish have scales and fins. Birds fly in the sky, while fish swim in water. Birds breathe air with their lungs, but fish breathe under the water through their gills. Birds make nests in trees or on the ground, while fish lay eggs in water.
