

Choose a color for each type of fact below. Read the passage and highlight key facts as you go.

**day****both****night**

Day and night are two parts of every 24 hours. Both day and night happen all around the world. During the day and night, people can work or sleep. Animals are active both day and night. The day is bright because the sun is out, but the night is dark when the sun sets. We often go to school or work during the day, while we usually sleep at night. We see clouds in the sky in the day, but at night, we might see stars. It's usually warmer in the day and cooler at night.
