

Use the space provided to draw and solve each word problem.

Next, write the problem as a multiplication sentence.

A farmer sells 28 baskets of apples a day for 6 days. How many apples does the farmer sell in total?

$$\boxed{} \times \boxed{} = \boxed{}$$

There are 37 students in each grade. If there are 3 grades, how many students are there altogether?

$$\boxed{} \times \boxed{} = \boxed{}$$

A library has 19 shelves. Each shelf holds 7 books. How many books can the library hold?

$$\boxed{} \times \boxed{} \quad \boxed{}$$

A parking lot has 26 rows. Each row can fit 4 cars. How many cars can the parking lot hold?

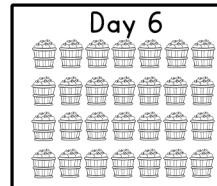

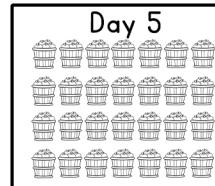

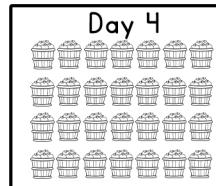

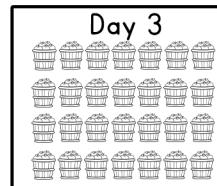

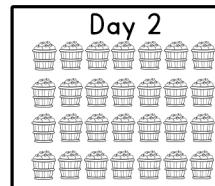

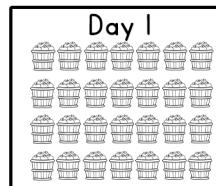

$$\boxed{} \times \boxed{} = \boxed{}$$

Use the space provided to draw and solve each word problem.

Next, write the problem as a multiplication sentence.

A farmer sells 28 baskets of apples a day for 6 days. How many apples does the farmer sell in total?

$$28 \times 6 = 168$$

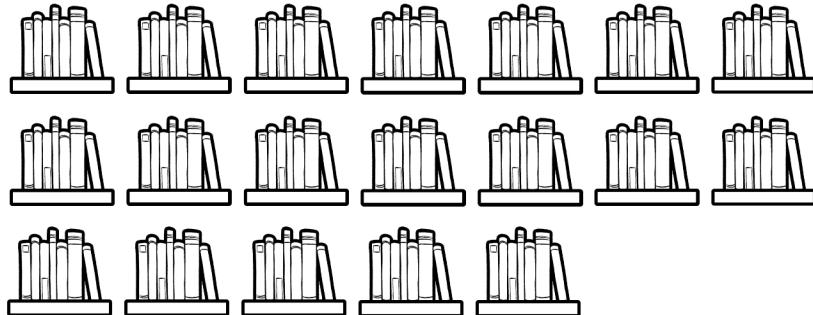

There are 37 students in each grade. If there are 3 grades, how many students are there altogether?

$$37 \times 3 = 111$$

A library has 19 shelves. Each shelf holds 7 books. How many books can the library hold?

$$19 \times 7 = 133$$

A parking lot has 26 rows. Each row can fit 4 cars. How many cars can the parking lot hold?

$$26 \times 4 = 104$$
