

FUN FACTS ABOUT APPLES

APPLE FAMILY

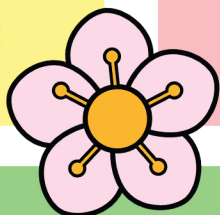

Apples belong to the rose family. Roses, pears, and cherries are apple cousins!

ORCHARD GROWN

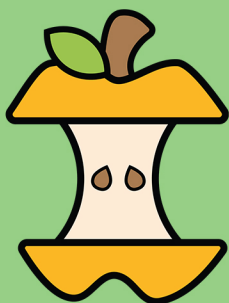

Apple trees are grown in large gardens called orchards. One tree can grow hundreds of apples each year!

SUPER SEEDS

One apple contains about 5–8 seeds inside. Each one could grow into a brand new tree!

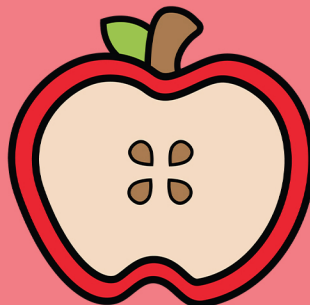

MOSTLY AIR & WATER

Apples are about 25% air and 86% water — that's actually why they float!

THOUSANDS OF TYPES

There are more than 7,500 varieties of apples grown around the world.

BUSY BEES

Apple trees need bees to carry pollen from flower to flower. Without bees, there would be no apples.

WORTH THE WAIT

It takes 4–5 years for a newly planted apple tree to grow its first apples.

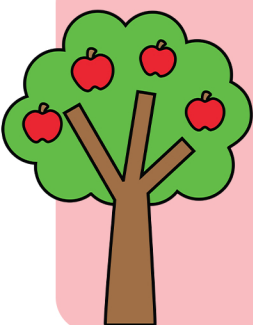

EAT THE SKIN!

Apples are full of vitamins and fiber. Eating the skin gives you extra nutrients!

IT'S A FRUIT!

Apples are actually fruits, not vegetables. They grow from flowers and have seeds inside, just like pumpkins!

AROUND THE WORLD

Apples are grown on every continent except Antarctica. China grows the most apples in the world.
