

APPLE LIFE CYCLE VOCABULARY CARDS

seed

A tiny package tucked inside an apple that can grow into a new tree when planted in soil with water and sunlight.

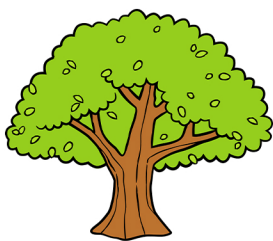

seedling

A tiny, young apple plant that has just pushed up through the soil with its first small leaves.

sapling

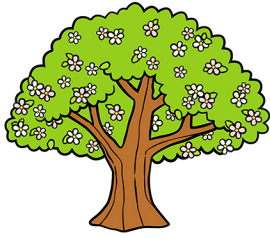

A young apple tree that is getting taller and stronger but is not yet big enough to grow flowers or fruit.

mature
tree

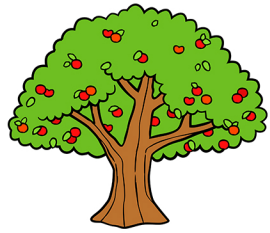

A tall, strong apple tree that has finished growing.
It is ready to make flowers and grow apples every spring and summer.

APPLE LIFE CYCLE VOCABULARY CARDS

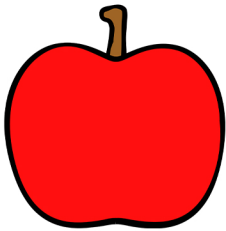

blossoming
tree

An apple tree covered in pretty pink and white flowers called blossoms. Bees visit the flowers and help them turn into apples!

apple
tree

A tall tree covered in bright red, green, or yellow apples that are ready to pick. It grew all the way from a tiny seed!

apple

A round, colorful fruit that grows where the blossom was and gets bigger all summer long. Inside it holds the seeds that start the whole cycle again!
