

Butterflies
taste with their feet.

Butterfly wings are
covered in tiny scales.

Butterflies build a
cocoon before
becoming an adult.

Monarch butterflies can
migrate thousands of
miles.

Butterflies have four
wings, not two.

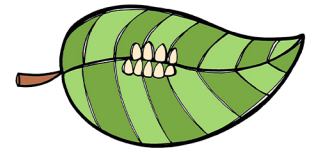

All butterflies
are nocturnal
and fly at
night.

A butterfly's proboscis
works like a drinking
straw.

Butterflies live together
in hives like bees.

There are over 20,000
species of butterflies in
the world.

Butterflies cannot fly
well if their body gets
too cold.

Butterflies are the
fastest flying insect in
the world.

A caterpillar's
skin does not
grow, so it must
molt several times.

Every butterfly species
migrates every year.

Butterfly eyes are made
of thousands of tiny
lenses.

The painted lady
butterfly is found on
every continent except
Antarctica.

Butterflies undergo
complete
metamorphosis
with four life
stages.

A butterfly's chrysalis is
soft and squishy like a
caterpillar.

Some adult butterflies
only live a few weeks.
