

FROG ADAPTATIONS

Moist/permeable skin: Skin that stays damp with tiny openings that let water and air pass through to help a frog breathe and stay cool.

Bulging eyes: Eyes that stick up and out from the head, letting a frog see in almost every direction.

Camouflage: Colors or patterns that help a frog blend in with its surroundings.

Poison: A harmful substance some frogs make on their skin to keep predators from eating them.

Croak: The sound a frog makes to attract a mate or warn other frogs to stay away.
