

FUN FACTS ABOUT FROGS

FROZEN SOLID

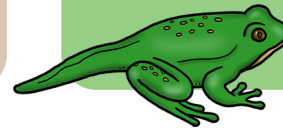

Wood frogs can survive being partly frozen during the winter and then thaw out again in spring.

TINY BUT TOXIC

Poison dart frogs are small, but some species carry enough toxin to be dangerous to predators.

AROUND THE WORLD

Frogs live on every continent except Antarctica.

JUMPING CHAMPIONS

Some frogs can jump more than 20 times their own body length in a single leap.

SKIN THAT BREATHES

Many frogs can absorb water, and even some oxygen, right through their skin.

GIANT OF THE SPECIES

The Goliath frog, the largest frog in the world, can grow to be over a foot long.

NO TWO CALLS ALIKE

Each frog species has its own unique call that helps it find mates of the same kind.

NO CHEWING REQUIRED

Frogs swallow their prey whole because they do not have teeth built for chewing.

SWALLOWING WITH THEIR EYES

Frogs use their eyeballs to help push food down their throat when they swallow.

SEE-THROUGH SKIN

Glass frogs have skin so clear on their undersides that you can sometimes see their heart and other organs.
