Internal Human Brain

SUPERSTARWORKSHEETS.COM

External Human Brain

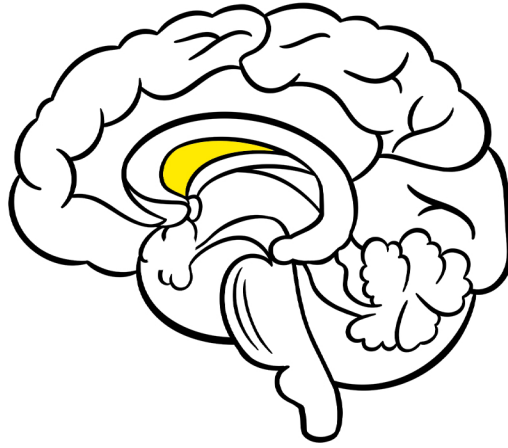

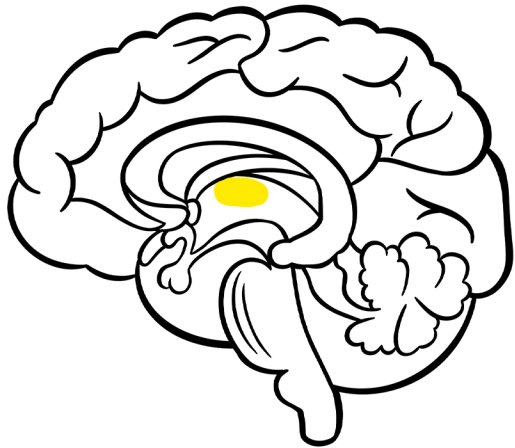

SUPERSTARWORKSHEETS.COM

The internal view of the human brain shows the inside of the organ, revealing its inner structures, deep functional centers, and connecting pathways.

SUPERSTARWORKSHEETS.COM

The brain is the control center of the body that processes information, controls movement, and enables thought. It is located inside the head, protected by the skull.

SUPERSTARWORKSHEETS.COM

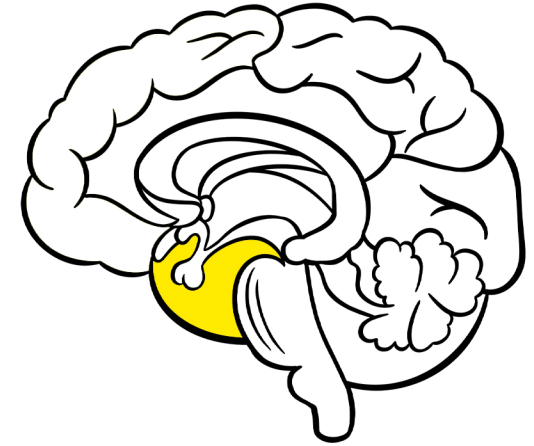

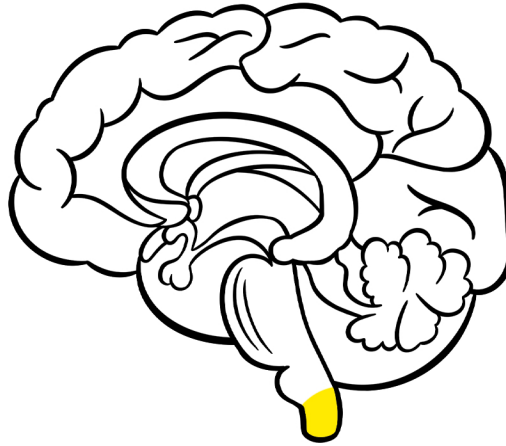

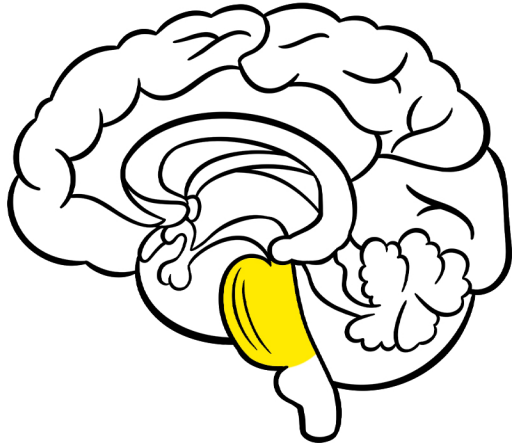

Thalamus

Ventricle

A structure that relays sensory information to the right part of the brain.

A fluid-filled space inside the brain that produces and circulates cerebrospinal fluid.

Pons

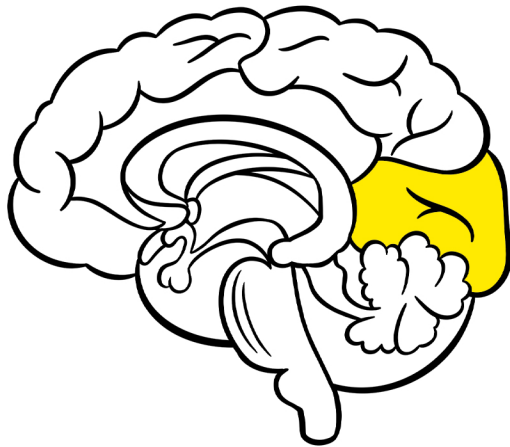

Spinal Cord

Temporal Lobe

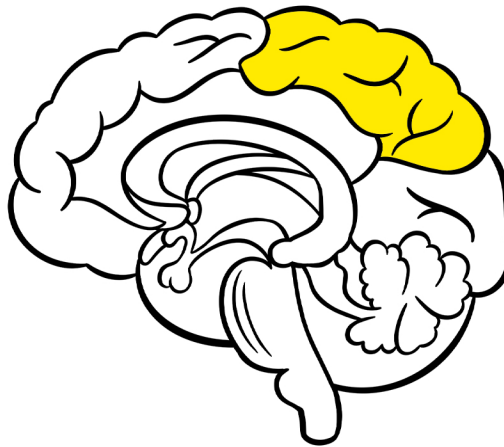

Part of the brain stem
that relays messages between
the brain and
the rest of the body.

The long bundle of
nerves that connects
the brain to the rest
of the body.

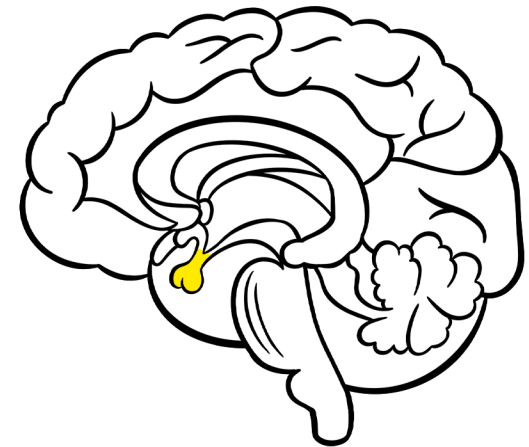

The part of the
cerebrum that processes
hearing and memory.

Pituitary Gland

SUPERSTARWORKSHEETS.COM

The back part of
the cerebrum that
processes what we see.

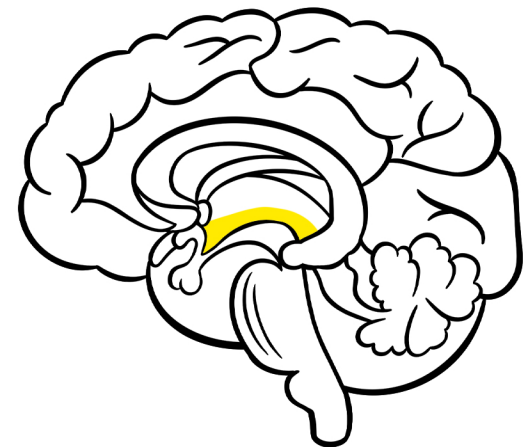

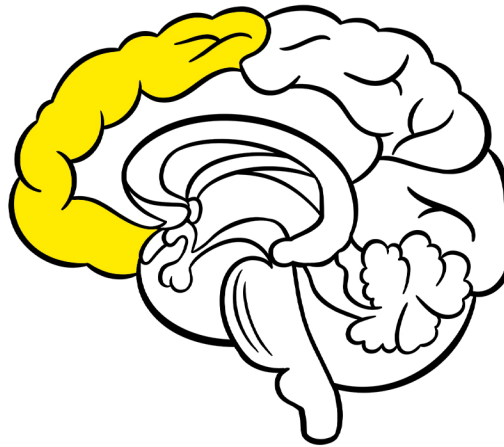

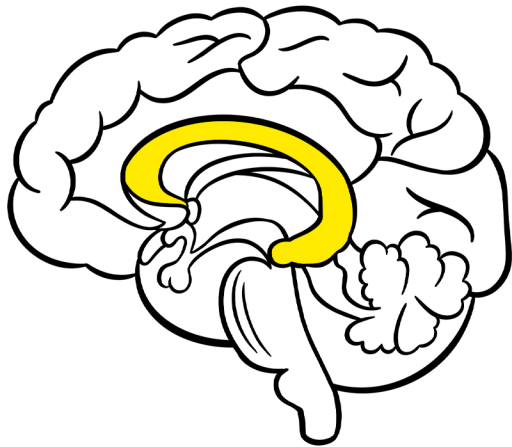

SUPERSTARWORKSHEETS.COM

The part of the
cerebrum that
handles touch and
spatial awareness.

SUPERSTARWORKSHEETS.COM

A pea-sized gland
that releases hormones
to control growth and
other body functions.
