Parts of the Human Stomach Definition Labels

Body

The main, middle section of the stomach.

Cardia

The opening where the esophagus connects to the stomach.

Circular Layer

The middle muscle layer of the stomach wall, wrapping around it.

Duodenum

The first section of the small intestine, right after the stomach.

Esophagus

The tube that carries food from your mouth down to your stomach.

Fundus

The upper, rounded part of the stomach.

Greater Curvature

The longer, outer curved edge of the stomach.

Lesser Curvature

The shorter, inner curved edge of the stomach.

Longitudinal Layer

The outer muscle layer of the stomach wall, running top to bottom.

Mucosa

The inner lining of the stomach.

Oblique Layer

The innermost muscle layer of the stomach wall, running at an angle; unique to the stomach among digestive organs.

Pyloric Sphincter

The ring of muscle that controls food leaving the stomach through the pylorus.

Pylorus

The narrow end of the stomach that connects to the small intestine.

Rugae

The folds in the stomach's inner lining that let it stretch as it fills.
