Arrector Pili Muscle

SUPERSTARWORKSHEETS.COM

Artery

SUPERSTARWORKSHEETS.COM

Fat tissue found mainly in the hypodermis that stores energy and cushions the body.

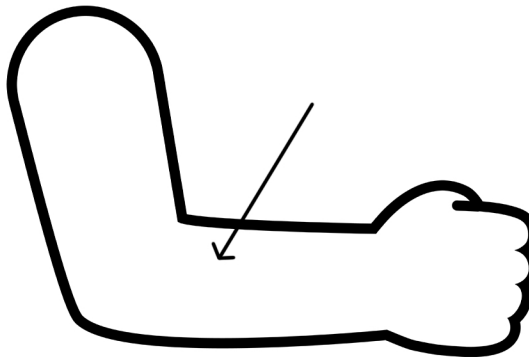

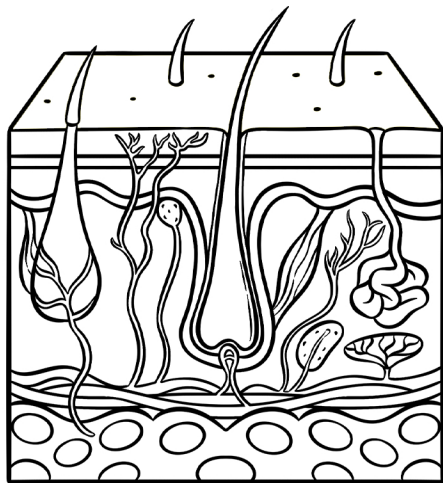

SUPERSTARWORKSHEETS.COM

A tiny muscle attached to a hair follicle that pulls the hair upright, causing goosebumps.

SUPERSTARWORKSHEETS.COM

A blood vessel that carries oxygen-rich blood from the heart to the skin.

Internal Human Skin

External Human Skin

The internal view of human skin shows the inside layers of the organ, revealing the epidermis, dermis, hypodermis, hair follicles, glands, and blood vessels.

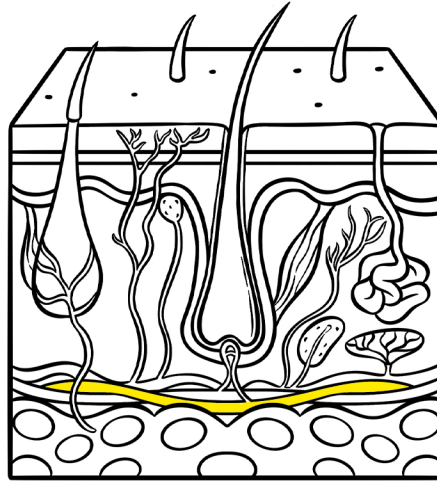

Human skin is the body's largest organ, forming a protective barrier that covers the outside of the body, helps regulate temperature, and provides sense of touch.

PARTS OF HUMAN SKIN

The tiny opening at the surface of the skin where sweat exits from a sweat gland.

SUPERSTARWORKSHEETS.COM

PARTS OF HUMAN SKIN

A blood vessel that carries blood from the skin back toward the heart.

SUPERSTARWORKSHEETS.COM

Nerve

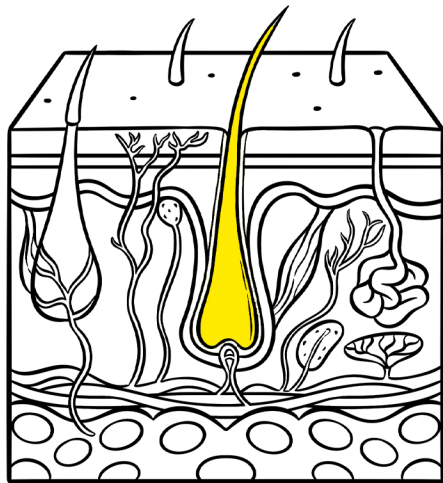

Oil Gland

Sweat Gland

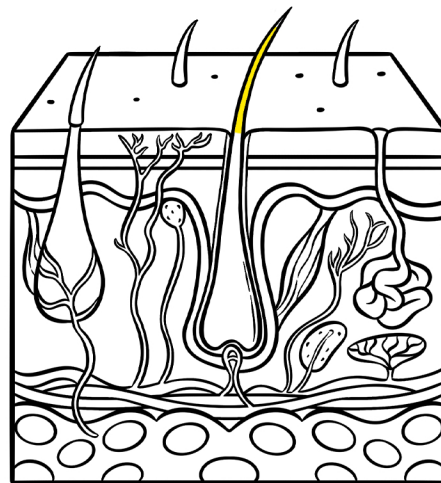

A structure that carries messages between the skin and the brain, letting the body sense touch, pressure, heat, cold, and pain.

A structure in the dermis that makes oil to keep skin and hair from drying out.

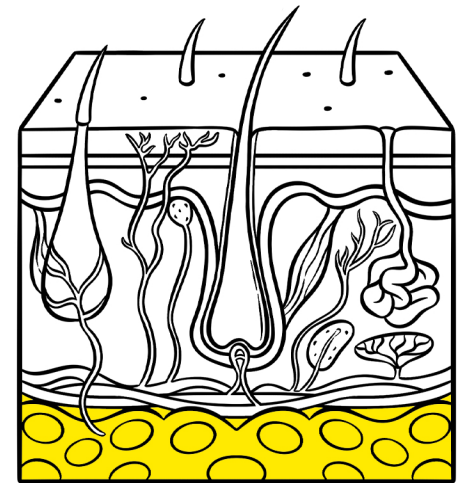

A structure in the dermis that produces sweat to help cool the body.

Hair Shaft

SUPERSTARWORKSHEETS.COM

Hypodermis

SUPERSTARWORKSHEETS.COM

The small pocket
in the dermis that a
hair grows out of.

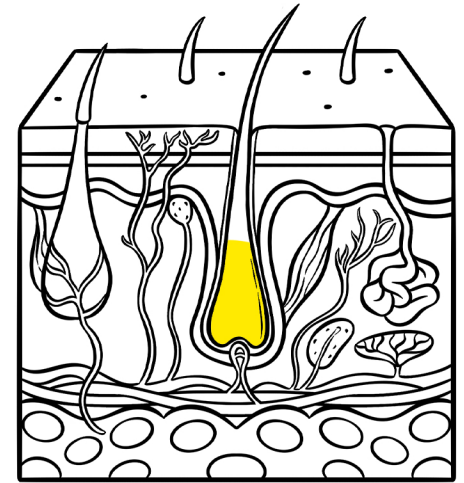

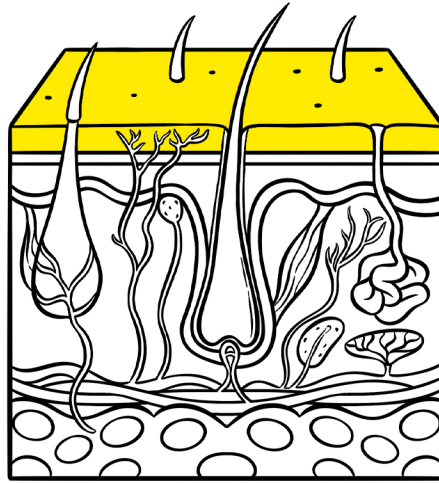

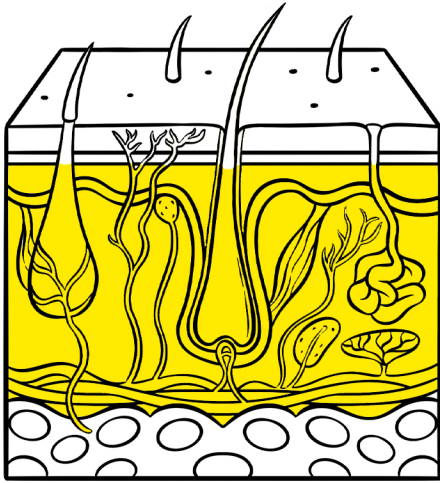

SUPERSTARWORKSHEETS.COM

The part of a hair that
is visible above the
surface of the skin.

SUPERSTARWORKSHEETS.COM

The deepest layer of skin,
made mostly of fat and
connective tissue, that
cushions the body and
helps hold in heat.

Dermis

Epidermis

Hair Bulb

The thicker, middle layer of skin under the epidermis; it contains blood vessels, nerves, hair follicles, and sweat and oil glands.

The thin, outer layer of skin that you can see and touch; it protects the body from germs and the outside world.

The rounded structure at the base of a hair follicle where new hair cells are made.
